**IN A WORLD OF CHANGE, YOU NEED THE  
FREEDOM TO REINVENT WORKSPACES.  
INSCAPE GIVES YOU OPTIONS FOR EVERY  
SCENARIO: REFORM MOVABLE WALLS.**

Organizations grow, roles evolve, business patterns shift - these are all facts of life in an era of constant change. To keep pace, you want the flexibility to reconfigure and even reinvent your workspaces. Building on the sustainability and proven economy of Inscape's movable wall solutions, Reform adds two further elements of design intelligence: a broad range of aesthetic choices, and simple, efficient integration with systems furniture. All this with minimal disruptive downtime and none of the environmental impact or longer-term constraints of permanent walls. Reform provides the versatility you need to meet today's space planning priorities while keeping your options open for the future.

## OFFICE CONFIDENTIAL

With Reform you can create elegant personal workspaces that ensure the privacy managers need to work productively. In addition to an impressive array of surface finishes, Reform walls offer flexible integration with systems furniture. In the office scenario above, the cantilevered desktop and suspended overhead storage bin reduce furniture costs and save floor space. Moreover, the entire installation is quick and straightforward, with minimal disruption to nearby offices, and none of the mess and unhealthy dust associated with traditional drywall. Because Reform walls are so economical to maintain and easy to reconfigure as needs change, you can make a strong design statement today while realizing a sound return on your investment over the long term.

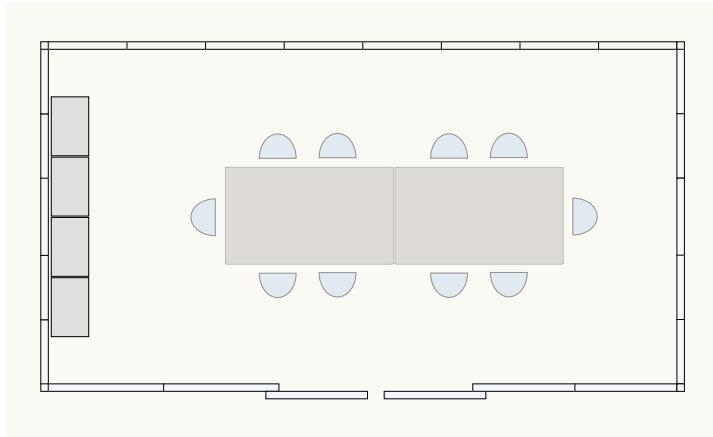

Combining a range of surface finishes with fully or partially glazed panels, you can use Reform walls to create highly flexible workspace, office and collaborative areas. Panels are only 2¼" thick, minimizing footprint size, and come in an extensive range of widths and heights to fit every setting and application.

## MEETING OF MINDS

In an organization committed to managing change, even a boardroom may have to be extended, relocated or replaced by another kind of workspace down the road. With Reform walls, you can create an elegant setting in no time (the boardroom above was configured in less than a day) while retaining the freedom to replace a good idea with an even better one as business conditions change. Reform's wide selection of aesthetic choices helps you set the right tone: the glass and vinyl panels above were chosen from a range of surface options that also includes fabric, wood veneer and powder-coated steel, as well as partially glazed panels. With total control over panel and door styles, color schemes and other design variables, you can create tailor-made workspaces for every scenario - formal or informal, individual or collaborative.

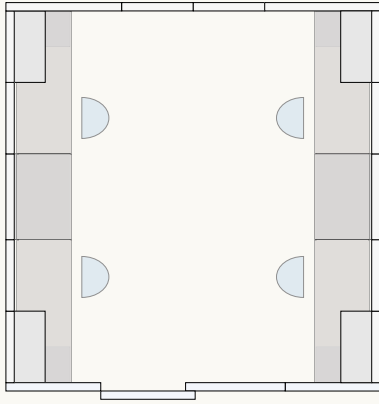

Reform's design is non-progressive: you can remove or replace one panel without having to remove those adjoining it. The premium-quality hardware is precision-engineered for superior fit and finish. Panels are designed to avoid damaging ceilings and floors during installation or removal while still ensuring long-term structural integrity.

## BUILD ONE FOR THE TEAM

The growing emphasis on teamwork in organizations - and the life cycle in which teams form, expand, disperse and form new groups with different needs - has heightened the demand for flexible workspaces. In the team office configuration above, Reform walls and integrated systems furniture come together to achieve an ideal balance between fruitful interaction and the need for personal space. Co-workers can interact and communicate productively in an attractive, secure environment; Reform walls ensure privacy in adjoining spaces as well. As the team's makeup or work patterns change, the shared space can be enhanced with additional suspended components or entirely reconfigured to meet a new set of priorities.

Reform panels can provide for cable drops, unobtrusively delivering power and data connections to every desktop. The panels' high Sound Transmission Coefficient (STC) ratings help ensure confidentiality and quiet between adjacent offices. Moreover, Reform has a wide array of glazed panels and doors to allow more light and create a feeling of openness while maintaining privacy.

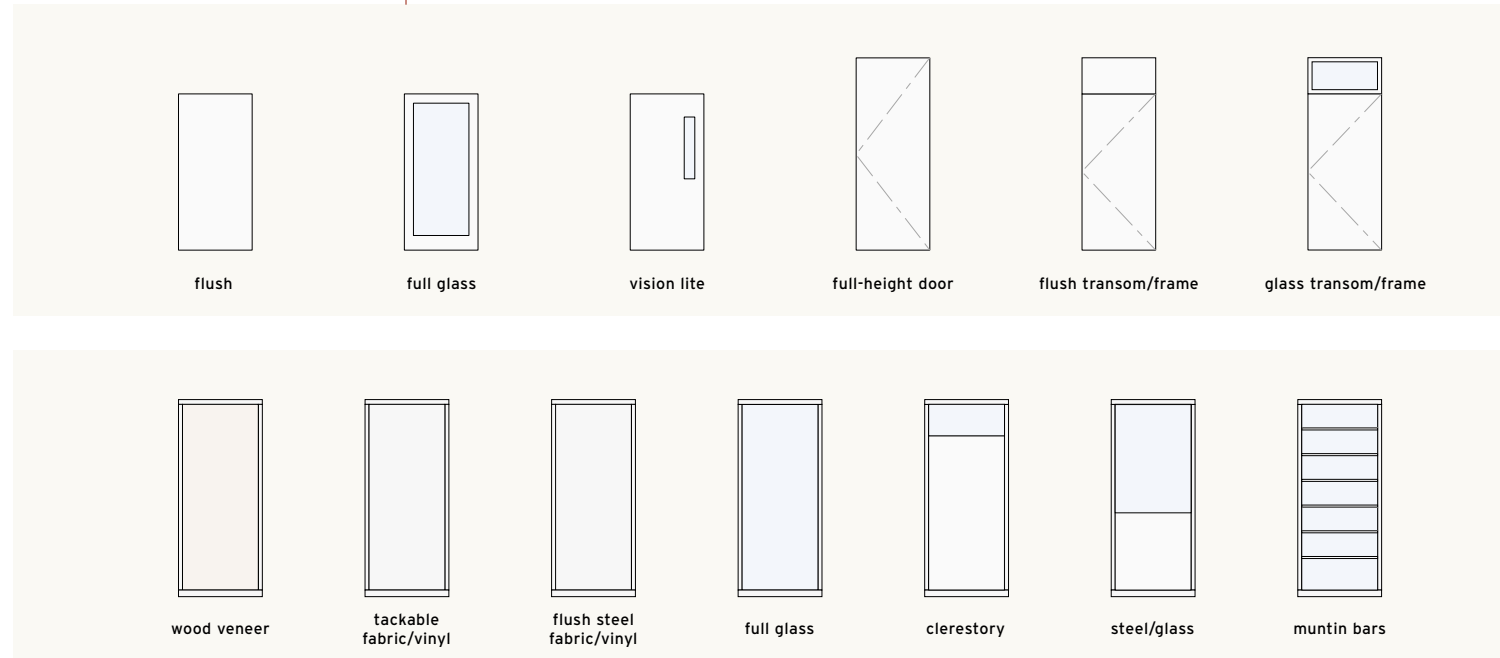

Reform movable walls give you the power to create attractive, intelligently designed workspaces today and then cost-effectively redefine your vision as circumstances change. Built-in versatility, environmental integrity and a measurable return on your investment make Inscape's movable wall solutions a superior alternative to traditional drywall and other partitioning options. With Reform's added advantages - more aesthetic choices, as well as effortless integration with systems furniture - you are even better positioned to embrace change and look beyond the obvious to create a new kind of flexible workspace.

**DOORS**

Reform solid-core doors (hinged, pivot or sliding) come in standard 3' x 7' and full-height sizes. Choose from painted, wood veneer, laminate or glazed finishes.

Reform's powder-coated finish is available in a broad range of colors that can be matched to any design specification.

**PANELS**

Reform panels - powder-coated, fabric or vinyl on steel, tackable fabric/vinyl, wood veneer or factory-glazed - are available in a wide array of widths and heights.

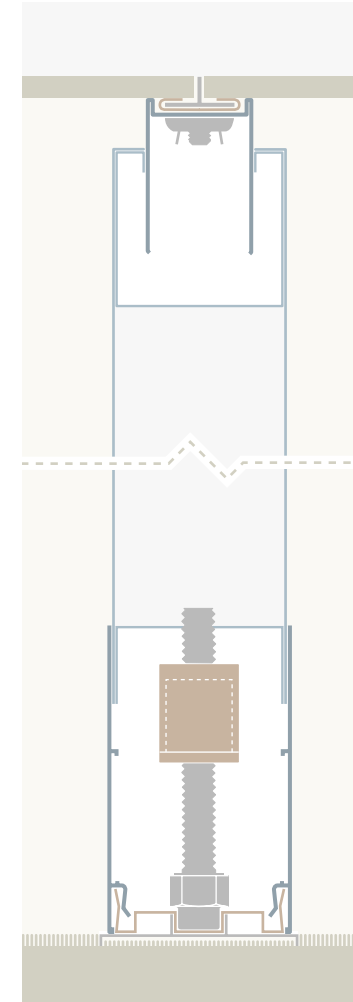

Reform walls can use a mix of surfaces on adjacent panels. The reveal strip conceals slotted steel uprights from which systems furniture can be hung. Adapter brackets are available for most systems.

Power/data cables can be routed vertically through the Reform panel interior, with standard outlets installed at any height on the panel surface. In addition, power can be extended through the base cavity using a modular electrical system.

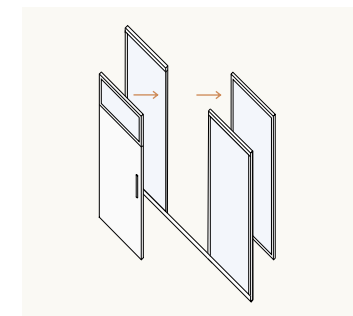

Reform panels are distinguished by their precise detailing and superb fit and finish. Metal-to-metal panel connections ensure that aesthetic integrity is maintained in future reconfigurations. Reform movable walls are 98 percent reusable.

Reform's recessed ceiling channel attaches to T-bar ceilings with non-damaging clips for quick installation and removal.

Reform's floor track grips the floor with non-damaging fasteners.

Reform is a non-progressive solution: any unitized panel can be replaced without removing those adjacent to it. Similarly, a 42" wide panel can be replaced with a door frame of the same width.
